Marker assisted selection (MAS)

Optimise your breeding process

Vegenov develops molecular biology tools to help you to:

Accelerate the recovery to the recurrent genetic background

Accelerate the introgression of traits of interest

- ◆ **Search for molecular markers** of the genetic background or linked to genomic regions controlling traits of interest;
- ◆ **Study of the diversity of your genetic resources** to optimise the choice of the best parents to cross;
- ◆ **Screening of your progeny during selection** at a very early stage of development with markers from the gene pool and/or markers linked to loci of interest (major genes or QTL).

List of species for which we offer markers on a routine basis:

Allium
CMS, Downy mildew

Pepper
TMV, Xcv, TSWV

Melon
Aphis gossypii

Asparagus
Sexual determinism (super-male)

Wheat
OWBM, Eye Spot disease, SBMV, vernalization, Dwarfing

Tomato
Fol 0-1, RKN, TSWV, ToMV, Verticillium

Pea
PEMV

Prunus
Self-incompatibility, Plum Pox Virus, Green aphid, Powdery mildew, Bacterial spot

Rapeseed
Rfo

Rice
Herbicide resistance

We can also develop new markers to meet your needs
