

Customized plant research

Our services for agri-food sector

Vegenov teams support your R&D projects at key stages of your food production processes, with our expertise **in sensory and nutritional analysis, plant traceability, agronomic development and technology monitoring.**

Expertise & services

Sensory and nutritional evaluation of fresh and processed products

- ◆ Position your products based on consumer expectations and market benchmarks.
- ◆ Identify the strengths or barriers to consumption of your products.
- ◆ Measure the impact of production routes on product quality
- ◆ Determine the organoleptic shelf life of products.
- ◆ Identify sensory or biochemical markers that can be used to predict consumer preferences.

Genetic traceability & conformity of plant-based raw materials, (micro)algae or micro-organisms

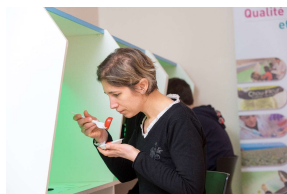

Agronomic valorization of biomass, waste and co/side-products

Technology monitoring

Equipements

Sensory analysis room
& trained panels

Biochemistry Lab

Molecular Biology Lab

Agronomic evaluations in
growth chambers or
greenhouses
